EDITORIAL: GREETINGS TO THE KITCHEN

Hello dear customers,

Welcome to our catalog! The gastronomy industry is undergoing significant changes today more than ever. New laws, economic uncertainties, and digital challenges create conditions that require appropriate responses. Regardless of the exciting challenges that the year 2024 may bring, we will overcome them together!

We use emerging obstacles as opportunities for better performance and optimizing existing processes, especially when faced with them collectively with flexibility, creativity, and persistence. It is during periods of economic transformation that innovative business ideas, contemporary offerings, and fresh strategies emerge, setting the stage for new standards.

We, too, have expanded our product range and explored forward-thinking concepts. Since 2018, we have been the first provider in the field of food service packaging to offset all unavoidable CO2 emissions generated during production and our operations.

We continuously adapt our range to new legal or social challenges, always keeping your requirements, needs, and wishes in mind. We consistently expand our Happy Family's reusable products and offer the free 'Mehrweg-App' (reusable app) as a service. Our extensive range of single-use packaging made from various eco-friendly materials leaves none of your wishes unfulfilled.

In 2024, we will continue to channel our energy into the development of sustainable packaging and digital solutions. On behalf of the entire team, I wish you a successful year and great pleasure in exploring our catalog!

Michael Brink
Michael Brink (CEO)

CONTENTS

PAGE 06

Your strong service partner

Excellent Service: High delivery capability, rigorous quality checks, custom branding, informative content, and support for all questions regarding materials and regulations.

PAGE 16

Our reusable packaging

Functional, reusable, uniquely sustainable: The biobased reusable packaging from our Häppy range is sturdy and ensures sustainable enjoyment.

PAGE 24

If disposable, then sustainable

Palm leaf, sugarcane, wood fiber, paper, and more – many of our products are made from renewable, recycled, or recyclable raw materials.

PAGE 08

Together for the climate

We offset unavoidable CO2 emissions from production and our operational processes. Find out how you can actively participate in our commitment to the climate here.

How to Reach Us

59 Imprint

YOUR ALL-ROUNDER FOR SUSTAINABLE PACKAGING

As a restaurateur or gastronome with packaging needs, you can confidently turn to us in any situation! For over 10 years, we have been meeting the packaging needs of the hotel industry, gastronomy, wholesale, and food retail with our extensive range of sustainable disposable and reusable products with matching accessories.

A Strong Partner for Sustainable Packaging

The term sustainability is not an empty phrase for us. We strictly ensure that our product ranges consist of renewable, bio-based, or recycled materials such as sugarcane and bagasse, palm leaves, FSC®-certified wood from sustainable forestry, as well as paper and cardboard. Their recyclability is of crucial importance to us because successful recycling means using resources more than once. This contributes significantly to sustainability.

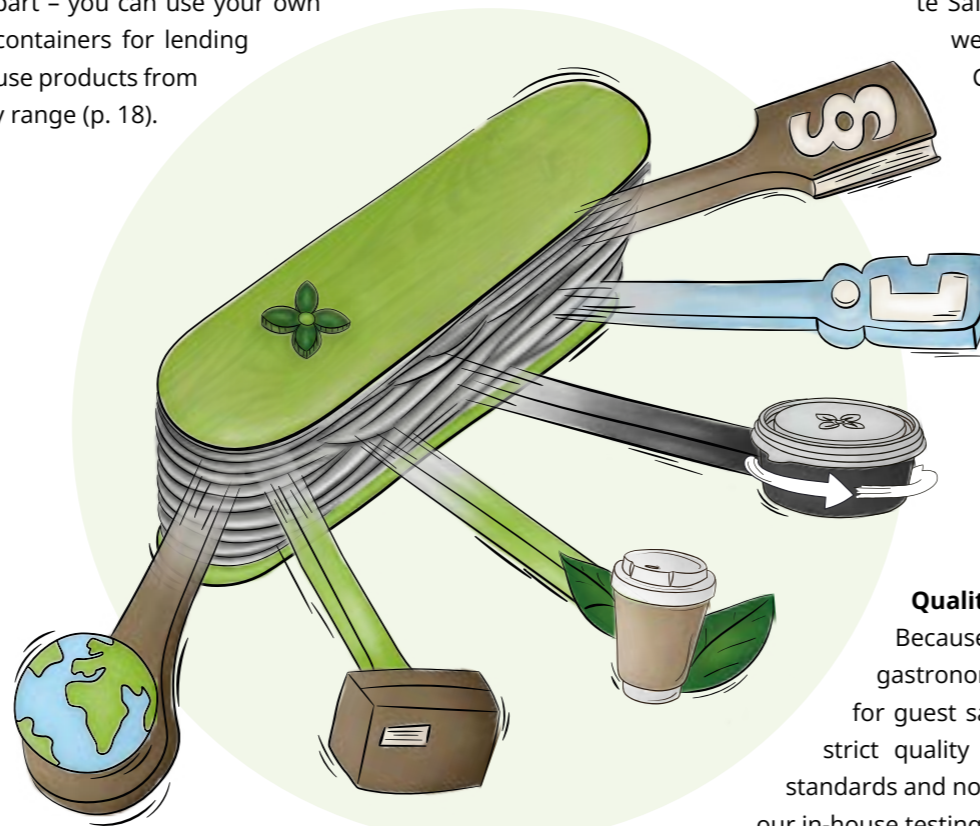

Reusable Products from our Häppy Family

The mandatory requirement for reusable offerings since 2023 has inspired us to develop practical and sustainable reusable solutions. Sustainable materials were crucial for us in their implementation: FSC®-certified wood fibers and Bio-PP made from old cooking oil instead of petroleum-based PP. The fact that Häppy products are also visually appealing and compatible with our disposable range makes them even better, along with many other advantages (p. 16).

Digital Innovations with Added Value

As a digital and easily implementable solution for the deposit-free rental of your reusable containers, we offer the free reusable app. Rental and return are as easy as using a QR code, and the app offers many other advantages. The best part – you can use your own reusable containers for lending and even use products from our Häppy range (p. 18).

Calculating the CO2 Footprint

Developing awareness of climate and environmental protection is important. As pioneers in CO2 compensation, we set standards for sustainability with the „Climate Safe 360°“ label. Since 2018, we have been offsetting all CO2 emissions based on 2017 data, from production to disposal and in our operational processes, making an active contribution to protecting our planet. Through your product purchases, we can report the amounts of CO2 offset there. We aim to support you in making the CO2 footprint of your gastronomy more transparent, making your commitment to sustainable business practices visible (p. 11).

Quality over Quantity

Because we know that smooth operations in gastronomy are a fundamental requirement for guest satisfaction, all our products undergo strict quality management according to current standards and norms. Precise inspections take place in our in-house testing laboratory and by independent third parties. This ensures that our products deliver what you expect from them!

Good Service - Happy Guests

This applies to you and, conversely, to us as well. Flexibility, helpfulness, and going the extra mile not only build trust but also demonstrate reliability, even when things aren't going perfectly. Our service is, therefore, very important so that we can support you in your daily challenges, big and small. Because good service means happy customers.

Want More?

Many of our products can be customized to match your company branding. You can find helpful tips, current industry trends, and suggestions for efficient digitalization and more on our blog. For any questions about materials, delivery, applicable packaging laws, and EU regulations, we are also available through the usual communication channels (p. 58). You can be sure: With ecobiopack, you have a strong partner for all cases by your side!

FULLY CO2-COMPENSATED

Offsetting Climate-Relevant Emissions

Terms like ‚CO2-compensated‘ or ‚climate-friendly‘ serve as proof for companies that they are offsetting their carbon footprint. The calculation distinguishes between the carbon footprint of all relevant emissions throughout the entire life cycle of a product, known as the Product Carbon Footprint (PCF), and the carbon footprint generated during normal business processes, known as the Corporate Carbon Footprint (CCF). Through precise accounting, companies can identify, analyze, reduce, and ideally avoid the impacts of all emissions.

Pioneers in Climate and Environmental Protection

We have been pioneers in CO2 compensation and have been offsetting all unavoidable CO2 emissions from our products and operational processes since 2018. Transparency and traceability are particularly important to us in implementing our climate-friendly measures. Through our developed label ‚Climate Safe 360°,‘ we can calculate our emissions and publicly communicate our commitment to the climate. As a result, we label our products as ‚CO2-compensated.‘

We Support Your Commitment to Sustainability

We are very grateful that, by purchasing our products, you are already actively advocating for a more responsible use of our resources. To make it tangible for you to see how much CO2 we have been able to compensate for on your behalf, you can obtain a certificate showing all the CO2 emissions you have offset with us since 2023.

Our Sustainability Manager, Frederik Feuerhahn, prepares the respective greenhouse gas inventories in accordance with the internationally recognized standards of the Greenhouse Gas Protocol (GHG Protocol), which are demonstrably certified. If you have any further questions, please contact us at climate360@greenbox.bio.

OUR CLIMATE PROJECT

CO2 Offset with Wind Power in India

We offset the unavoidable emissions of our products through climate protection projects, and for this year, we have chosen the ‚Wind Power Project‘ by Gold Standard in Gujarat, India. This project generates electricity in villages through wind power. The project’s goal is emissions-free electricity generation, as energy production with fossil fuels generates harmful emissions and contributes significantly to air pollution.

The total capacity of the wind farm is 301.4 megawatts from 136 wind turbines, each with a capacity of 2.2 or 2.3 megawatts. The sustainably generated electricity from wind power is fully integrated into the national Indian power grid. Furthermore, the operation of the wind turbines has positive effects on the local population. The project is a driver of economic prosperity, combats poverty, creates jobs, attracts investors, and contributes to the development of rural infrastructure.

YOUR OWN CO2 CERTIFICATE

There is no completely emissions-free production, and various activities in business operations result in CO2 emissions. However, we aim to minimize our contributions and reduce avoidable emissions as much as possible. That's why we have compiled a balance sheet of our CO2 footprint and offset unavoidable emissions through global climate projects (p. 09).

Our comprehensive CO2 accounting

For the CO2 balance of our products (Product Carbon Footprint, abbreviated as PCF), we calculate CO2 emissions from the entire life cycle, from cradle to grave. This includes handling raw materials, production, transportation, and disposal. The calculation of CO2 emissions during the extraction and processing of raw materials is based on market-based information and primary data from our suppliers. For production, we rely on various databases such as EcoInvent. Comprehensive CO2 accounting also includes emissions from the transportation of finished products to us or to you after you have placed an order.

Emissions from operational processes and disposal

The design of printed materials, IT and hosting, the use of company vehicles, business trips, and the ongoing energy consumption at the site also contribute to CO2 emissions in ongoing business operations. Emissions generated during disposal depend on the specific material and the associated disposal method, such as recycling or composting. You can easily track each step in our timeline.

Your certificate for sustainable business

We support you in disclosing your CO2 footprint, allowing you to transparently communicate your carbon offset to your guests. The conformity of our CO2 accounting has been confirmed by GUTcert as an external certification body. With a purchase in our shop, you cause 0 kg of CO2 emissions because we already offset unavoidable emissions through global climate and environmental projects. When you buy packaging from our shop, you directly participate in our sustainable commitment, as we disclose the amounts of CO2 offset through your product purchases. You can request a certificate in PDF format for the amounts of CO2 offset from your purchase. You can do this easily by clicking in your personal area in our shop. This way, you can make your commitment to sustainable business visible. Thanks to you, the carbon offset of our products is possible!

HOW IT WORKS:

1.

Go to:

co2.greenbox.bio
or to the CO2 portal
in your shop customer account

2.

Enter your customer number

Your 6-digit customer number
can be found on invoices

3.

Choose a start and end date

Orders within this period will be
considered

4.

Request your certificate

Your certificate will be sent to
the email address you provided
in your customer account

WHICH CO2 EMISSIONS DO WE OFFSET?

CO2 emissions
from the cultivation
of raw materials

- Market-based data for accounting
- If possible, primary data from the supplier

CO2 emissions during
the production
of items

- Database from EcoInvent, among others
- Analysis of production processes

CO2 emissions
during shipping
to us

- Transportation routes

Our company's
CO2 emissions

- IT
- Server
- Hosting
- Business trips
- Electricity & heating
- Company vehicles
- and more

CO2 emissions
during
shipping to you

- Transportation routes

CO2 emissions
during disposal

- Material-specific consideration of the disposal process
- Recycling, composting, thermal utilization, etc.

INSIDE OUR CORPORATE GROUP

Small gifts for customers.
And for the environment.

With ecobono from NORTHPOL

An ecobono is an environmental contribution that you can pass on to your customers as a thank-you for their order, purchase, or visit.

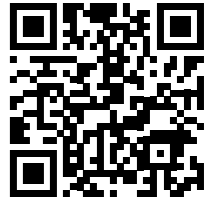

With the action portal from NORTHPOL, you can quickly and easily start your own ecobono environmental project. Simple, transparent, and cost-effective - starting from 3.7 cents per ecobono and customer contact. Set your ecobono per customer and choose how you want to transfer it. Your customers can then interactively allocate your ecobono to your selection of projects.

VOUCHER FOR YOUR OWN CAMPAIGN

Start your own environmental initiative and give it a try. Register for free and without obligation in the action portal.

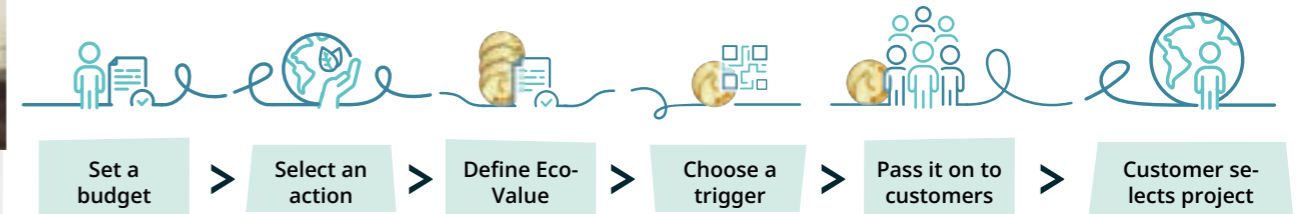

Or you can find information on pre-paid guest vouchers and ecobono food service packaging in the ecobiopack online shop.

Redeem the voucher code and get started:

CONNECT4GOOD

Visit ecobiopack:
www.ecobiopack.com

Our maxim is:

CONNECT FOR GOOD

Because collective synergies create positive change. Join forces with us for a more sustainable future! Call or write to us, we are happy to advise you on the possibilities of implementing your commitment on the NORTHPOL action platform.

E-Mail: beratung@northpol.com | Phone: + 49 (0) 421 830 637-0 | www.northpol.com

Lend your containers without a deposit - with the reusable app

The reusable app without system restrictions: no additional costs or fees

- Lend your containers without a deposit
- No need to scan QR codes. Simply enter the number of containers.
- Weekly reminders for returns starting from the second week, with your guests paying a reminder fee of €0.99 (for a maximum of 8 weeks). That's it, guaranteed.
- In case of non-return, you will receive €5 per container, including VAT.
- Keep track of the number of containers borrowed and their duration.
- Send your guests weekly offers via the news feed, free of charge.
- Allow your guests to pay with the app* if you wish.

Offer sustainable food service packaging! 99% biobased, from Häppy Compagnie

Of course, you can also lend our sustainable packaging from the Häppy reusable series (p. 16). Simply enter the number of rental containers and scan the generated code from your guests' app - done!

*To activate the payment function, you need to register with Stripe (www.stripe.com) as an online payment service. Stripe, along with possibly associated payment providers like PayPal or credit card companies, charges standard fees for payment processing. More information can be found on Stripe's website and during the registration process. Merwegs, as the provider and operator of the reusable app, does not charge any additional commissions or fees related to the payment function.

Smart, Green, Mobile

The new delivery token feature makes the rental process even more flexible, as your customers can conveniently specify the reusable containers as part of their order with delivery services such as Lieferando, Wolt, and others. Cashless payment for food and drinks is easily possible. The management of your account is done through the associated web portal. There, you will also find current information on rental development and trend analysis so you can keep track of your needs and place reorders in a timely manner. Additionally, we compensate you with 1 kg of CO2 per rental transaction.

Register your business in a browser

Create your business and test the reusable app completely risk-free.

my.merways.com/register

...or download the app and register your business there:

HÄPPY REUSABLE FAMILY

Our reusable product range

We take great pride in our Häppy range! All our products have proven themselves in gastronomic everyday life with the following positive features:

- Environmentally friendly packaging
- Biobased materials
- Customizable (colors/logos/embossing)
- Easy to use thanks to standard shapes and sizes
- Stackable and space-saving
- Sturdy transport
- Matching lids for sealing
- Made in Germany
- Dishwasher safe (125x)
- Microwave-safe when filled

That's what makes Häppy!

Our Häppy series product range leaves nothing to be desired. We offer bowls and cups with matching lids, burger and meal boxes, plates, and cutlery - all in various sizes, colors, and variations (p. 18).

Flexibility is our motto

All containers and bowls in the Häppy series are not only compatible with each other but also combinable with disposable containers available in the market. The seamless integration of Häppy containers into your gastronomic daily routine is guaranteed. Sealed containers can be stacked snugly and securely, saving space and ensuring your dishes arrive safely at their destination.

We prioritize sustainability

That's why our reusable products are made from biobased material, known as Bio-Compound. 98 percent of this composite material comes from renewable raw materials, with 60 percent being Bio-PP from used cooking oil and 40 percent from wood flour. The wood used comes from FSC®-certified forestry (p. 26).

Originality makes the difference

Many gastronomic establishments are thrilled with the possibility of customizing our product range. For the unique appearance of all reusable containers, we offer personalized printing and embossing for the individual branding of your products (p. 52).

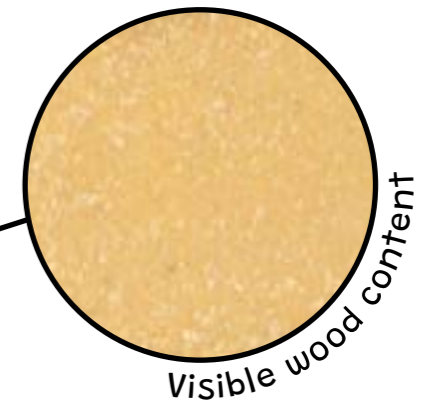

Innovative for success

We continually expand our product range and align ourselves with current market trends. You can help us with your suggestions and personal experiences in further development. Feel free to send your ideas and wishes to our product management: soma@greenbox.bio.

Material: Bio-Compound

All our Häppy products are made from Bio-Compound, which offers the following advantages:

- Wood from FSC® certified forestry
- Temperature resistant up to 70°C
- Made from renewable resources
- Dishwasher safe bowls and cutlery
- Microwave safe when filled
- No melamine, no BPA
- Robust and durable
- Sustainable appearance and high-quality feel
- Designed and manufactured in Germany

TOGETHER FOR A GREENER FUTURE

Together for a Greener Future

The use of finite resources such as petroleum-based plastic for disposable foodservice packaging is not sustainable. Instead, we rely on renewable resources and insist on their certified sustainable cultivation whenever possible. This allows us to replace almost every conventional petroleum-based plastic packaging with an environmentally friendly alternative!

Environmentally Friendly Products for the Foodservice Industry

Our range of sustainable packaging solutions is extensive. Whether it's plates, boxes, cutlery, cups, bowls, napkins, lids, bags – we offer practical packaging for every kitchen concept! This also includes sustainable alternatives in the areas of hygiene and textiles. Our disposable products

correspond to the common sizes in the market and are compatible with our reusable products. This means they can be easily stacked together and, with the appropriate lids, even stacked compactly.

Efficient Disposal

Our packaging alternatives are made from renewable, natural resources such as sugarcane, bamboo, wood fiber, cardboard, and palm leaves. They are mostly biodegradable, recyclable, and completely carbon-neutral. However, we recommend disposing of them in recycling bins rather than in home compost or organic waste. Recycling our packaging means that the raw materials can be reused, saving the use of new resources and making it more sustainable.

We Listen to You

Do you have a suggestion on how to optimize your packaging solutions in the gastronomic business? We are always looking for innovative ideas to expand our range and tailor it to the needs of our customers. We even make

personalized branding of our products possible (page 52). Of course, we are here to assist you with any questions regarding disposable packaging, customization, and disposal (page 10).

	BIODEGRADABLE	WITHOUT PLASTIC (PETROLEUM-BASED)	LIQUID RESISTANT	CO2 COMPENSATED	PFAS FREE	CUSTOM PRINT	MICROWAVE	BAKING OVEN	RECYCLEBAR

MATERIALS

Bagasse from Sugarcane

Bagasse is a classic cradle-to-grave product, as it is made from the leftover sugarcane stalks generated during the sugar production process:

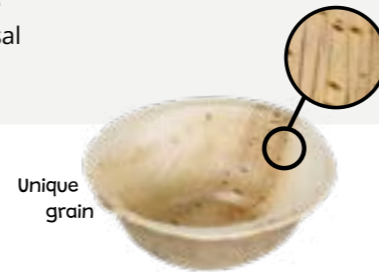

- Water-resistant and grease-resistant
- Fully biodegradable
- CO₂-neutral disposal
- Very stable, robust, and not easily bendable
- Has good thermal properties

Palm Leaf

Palm leaf is a result of the natural growth of Areca palms, falling up to 7 times a year:

- Stable and robust
- Food-safe
- Water-resistant: requires no artificial coating or additives
- Resistant to grease
- CO₂-neutral disposal

Unique grain

Paper / Cardboard / Wood

Like all renewable resources, wood sequesters CO₂ and is therefore a classic among our materials:

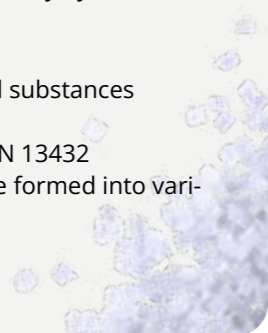

- Often from sustainable forestry
- Very stable and tear-resistant
- Fully biodegradable and compostable
- Positive carbon footprint
- Recyclable
- Suitable for printing

Bioplastic PLA

Made from renewable organic raw materials, PLA has very similar properties to petroleum-based plastics such as PP (Polypropylene) and PS (Polystyrene):

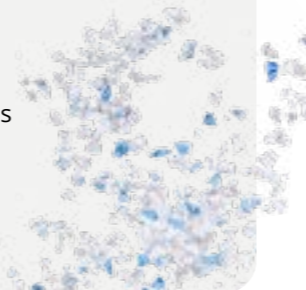

- High strength
- Free from BPA and other harmful substances
- Based on plant starch
- Compostable according to EN/DIN 13432
- Thermoplasticity, allowing it to be formed into various objects

rPET

rPET, or recycled Polyethylene terephthalate, refers to all plastics made from recycle or old plastic:

- Use of existing materials conserves resources
- Up to 100% recycled material
- Recyclable
- High strength
- Resistant to oils, fats, and alcohols
- Water-resistant
- Lower emissions

Many of our paper, cardboard, and wood products are certified with FSC® or PEFC certification. What do these abbreviations mean, and what do they stand for? Both seals promote sustainable forestry in ecological, social, and economic terms. To obtain this certification, many prerequisites must be met. This includes, above all, the sustainable management of the respective forest to prevent uncontrolled deforestation.

Native tree species are promoted, and timber harvesting is done gently and thoughtfully. In certified companies, the protection of employees is of the utmost importance. Independent third parties regularly check whether the necessary standards are being met. With FSC® (Forest Stewardship Council®), representatives of social and eco-

conomic interest groups as well as nature conservation organizations decide on the certification criteria. With PEFC (Programme for the Endorsement of Forest Certification Schemes), particular attention is paid to the interests of forest owners. Certification ensures environmentally friendly forestry that protects the important ecosystem of the forest.

SUSTAINABILITY IN CATERING

More and more people are concerned about sustainability. Many caterers, delivery services, and restaurants are changing their processes as a result. We'll show you how to explain to your guests that you also care about our environment.

Saving energy means saving costs

Use efficient equipment: Stoves, refrigerators, kitchen appliances, or lighting and heating in the dining area all consume energy. There's no way around it. Therefore, when purchasing new equipment, pay attention to high energy efficiency classes. These may be more expensive upfront compared to less efficient devices, but the savings will offset the costs in the medium and long term.

Regional and seasonal: 'Fresh' strawberries from Spain in winter? Your menu also incurs indirect energy costs for transportation and storage. Instead, focus on seasonality in your menus. To avoid long and environmentally taxing delivery routes, you can also look for producers in your region.

Less waste

Offer smaller portions: Sometimes, the eyes are bigger than the stomach, and a generous portion can lead to leftovers. The remainder usually ends up in the trash. By offering smaller portions, you can prevent wasting your good ingredients. The transition may go unnoticed when using smaller plates.

Store leftovers in sustainable takeaway containers: Alternatively to smaller portions, you can provide your guests with their leftovers in convenient takeaway containers to take home.

Use reusable products: In Germany, there is a mandatory reusable offering. This benefits the environment and opens up new opportunities for you. In our reusable range with certified and dishwasher- and microwave-safe products, you'll find everything you need. Encourage your guests to use reusable containers for takeaway.

NAPKINS

Napkins for Various Uses

Napkins are indispensable for any occasion that involves culinary delights. For example, they are essential for a food truck that sells both on-site and for takeaway. In restaurants or when catering, they are almost a requirement. Even in bars, napkins are often provided. Who wants to do without their cocktail napkin when the cold drink starts to drip? For many, napkins are also a part of a properly set table – they are both practical and can be used as an aesthetic table decoration. Granted: Our napkins don't come in flashy colors and patterns – they impress with their inner values. Our napkins are made from recycled

paper. This helps preserve tree stocks, and the production consumes less water and energy. The high-quality napkins are 1- or 2-ply and mostly in natural brown. Our white paper napkins are chlorine-free bleached. Whether cocktail napkins, cutlery napkins, or the classic paper napkin: in our range, you will find a wide selection for your gastronomic business. If needed, we can print the napkins according to your preferences.

PERSONALIZED PRINTING

Create Your Own Packaging in Just a Few Clicks

It's well-known that packaging with carefully selected colors, custom logos, and text can support a company's brand. However, the path to personalized coffee cups and similar items is often time-consuming and complicated. In the fast-paced world of the food service industry, dealing with day-to-day challenges such as staffing and inventory management takes precedence.

The search for new ways to stand out in competition with creative custom printing on food service packaging is often put on hold due to time constraints. We've taken your suggestions to heart and devised a concept that allows you to convey your message with just a few clicks during the ordering process.

Minimal Effort, Maximum Results!

Graphics often need to be created externally, which can be time-consuming and costly if you can't find a competent and reliable partner for this task. If the designs don't immediately meet your expectations, implementing the design can be delayed. To meet your desires for simpler solutions for individual and quick packaging design, we've introduced ,Easy-Print.'

Easy-Print

Under ,Easy-Print,' we will offer you pre-designed packaging like coffee cups that already have a fresh and appealing design. The entire process takes only a few seconds for those who decide at the last minute. All you need to do is enter your message, company name, and similar details... and you're done! After completing your order, you can relax while we take care of everything for you.

Go green with us!

Here, you can download our annual Green Report for free or read it directly in your browser.

We appreciate your interest and are also interested in any feedback, suggestions, or questions that may still be open. For these purposes, you can contact us anytime at info@bionatic.com. Enjoy reading!

Why Green Report?

Since our inception, the core of our work has been offering sustainable packaging solutions made from renewable, bio-based, or recycled materials for the food service sector.

Within the Bionatic Group (to which ecobiopack belongs), we combine e-commerce, production, and trading of disposable and reusable packaging, along with logistics and e-fulfillment, to benefit our customers in a sustainable manner. In addition, we develop innovative digital solutions with positive ecological effects.

Where possible, we avoid and reduce CO₂ emissions. Since 2018, we have fully compensated for the unavoidable emissions of our operations and marketed products through a Cradle-to-Grave approach, making us the first company in our industry to do so. This is not a given and is done voluntarily.

We present our efforts and initiatives in this and other areas in our free Green Report for all interested parties.

New in this year's report are our two logistics partners, e-logs GmbH and Stephani Spedition GmbH, which provide us with the opportunity to make our logistics processes sustainable.

We don't stand still on our journey but continually initiate new sustainable projects and innovations. We welcome your suggestions and feedback. We look forward to it!

Dipl.-Ing. Frederik Feuerhahn
(Sustainability Manager)
